

GENERAL PLAN ERRATA

Added to Goal 10 of the Open Space/Conservation Element:

OS-10.10 In the design of future development within Community Areas and Rural Centers, the following sustainable land use strategies should be considered to reduce energy consumption, minimize greenhouse gas emissions, and foster healthier environments for people:

- Take an integrated approach to siting, design, and operation of buildings and infrastructure
- Incorporate multiple-uses for infrastructure (e.g., recreational fields designed to capture stormwater and reduce urban runoff)
- Design development to take advantage of solar-orientation
- Recycle brownfield sites
- Employ individual and systematic water conservation measures (e.g., native vegetation, bioswales, graywater reuse, high efficiency appliances)
- Promote Transit Oriented Development (TOD) to increase mobility and reduce auto dependency

Future development should be designed to maximize energy efficiency and accommodate energy infrastructure (i.e., transmission lines, power plants and pipelines, and fueling stations), including the potential for distributed renewable generation.

Added to Glossary:

CRITICAL VIEWSHED means those areas that are clearly representative of the rural and agricultural character of the Toro area and are clearly visible from public roads and the picnic areas of Toro Park.
