2014-2018 Community Health Improvement Plan for Monterey County California
2014-2018 COMMUNITY HEALTH IMPROVEMENT PLAN FOR MONTEREY COUNTY

This plan describes strategies, stakeholders, goals, and measures of progress for specific health concerns and disparities, and also highlights opportunities for members of our local public health system to align priorities and actions in a highly focused and organized manner.

The 2014-2018 CHIP for Monterey County includes information about our local health network and resources to further address priority issues. With awareness of the data, increased communication, and concerted efforts we can reach the target outcomes we seek. The CHIP will be reviewed and reported by the health network annually and revised every five years to monitor our progress and establish new priorities as needed.

There are many ways to get involved, large and small, and the invitation to join this effort is open. Individual organizations and collective efforts are described by name and internet addresses in the body and appendix of this report. Monterey County Health Department maintains and regularly updates a database of contact information for more than 300 organizations.

To learn more about how to connect, be added to our partner organization database, or if you are a partner who is not mentioned in this Community Health Improvement Plan, please contact us: Monterey County Health Department, Planning, Evaluation, and Policy Unit, at 831/755-4583 http://montereycountyhealth.org/index.php/service-catalog/hd-pep-svcs

I. Executive Summary

By their nature, complex problems – such as population-based health concerns – require complex solutions at the individual, family, community, and policy levels. Developing and sustaining a healthy community requires broad participation from a network of agencies, organizations, and institutions that employ numerous strategies ranging from awareness, self-managed behavior education, and monitoring, to institutional changes in the ways health care and environmental assets are distributed and accessed.

The 2014-2018 Community Health Improvement Plan (CHIP) for Monterey County is strongly rooted in input from community members and partner organizations that began, in November 2010, with a series of public dialogues conducted by Monterey County Health Department and Natividad Medical Center. Over ensuing years, extensive community input was collected and analyzed, yielding these important strategies:

- **A regional approach** would work best to provide greater health equity in Monterey County;
- **Social structures, environmental conditions, and policies** largely impact disease, injury, and well-being;
- **Collective impacts** by a network of groups can most effectively meet our community-wide goals.

Based on community dialogues and recent health data, **18 objectives were identified to define our regional, social/environmental/policy collective work to come:**

- **Initiative 1: Empower the community to improve health through programs, policies, and activities**
  - Decrease obesity and diabetes rates
  - Decrease births to teens
  - Decrease sexually transmitted infections
  - Decrease heart disease
  - Decrease asthma
  - Decrease fetal and infant mortality

- **Initiative 2: Enhance community health and safety by emphasizing prevention.**
  - Decrease bullying, gang activity, violent injury, and homicide
  - Increase literacy and education levels
  - Decrease poverty
  - Increase affordable health screening
  - Decrease drug, tobacco, and alcohol use
  - Decrease unintentional injury and death
  - Decrease environmentally-related illness and injury

- **Initiative 3: Ensure access to culturally and linguistically appropriate, customer-friendly, quality health services.**
  - Increase access to health care
  - Increase mental health services
  - Increase dental care
  - Increase MCHD nurse home visits
  - Increase access to culturally appropriate health education & care
II. Approach

Mobilizing for Action through Planning and Partnership

The 2014-2018 Monterey County CHIP was developed as a part of the National Association of County and City Health Officials’ Mobilizing for Action through Planning and Partnerships (MAPP) framework. MAPP is a tool that helps communities improve health and quality of life through community-wide and community-driven strategic planning. The MAPP process used in our CHIP effort includes these six elements:

- Organizing successful partnerships
- Visioning a healthy future for all
- Conducting four MAPP assessments
- Identifying issues of greatest importance to our community members and partners
- Formulating goals and strategies
- Taking action – including planning, implementing, and evaluating.

The four MAPP assessments that MCHD developed with community and partner input from 2011 through 2013 are these:

What is important to our community? What are our residents’ perceptions about their quality of life? What assets do we have?

The *Community Themes and Strengths Assessment* is a deep understanding of the issues that are important to county residents. Monterey County’s *Community Themes and Strengths Assessment* can be viewed and downloaded at [http://www.mtyhd.org/images/zoo/uploads/CommunityThemesStrengths.pdf](http://www.mtyhd.org/images/zoo/uploads/CommunityThemesStrengths.pdf)

What is the health status of our residents?

The *Monterey County 2013 Community Health Assessment* lists over 289 public health indicators that are analyzed over time and stratified by race/ethnicity, age group, and gender to identify priority health issues for community action. Monterey County’s *Community Health Assessment* can be viewed and downloaded at [http://www.mtyhd.org/images/PEP/PEP_pdf/Final_CHA_pdf_11_21_13.pdf](http://www.mtyhd.org/images/PEP/PEP_pdf/Final_CHA_pdf_11_21_13.pdf)
What are the activities, competencies, and capacities of our local public health system?

The Local Public Health System Assessment identifies strengths and areas of needed improvement in the public health system based on the 10 Essential Services of Public Health framework. Monterey County’s Local Public Health System Assessment can be viewed and downloaded at http://www.mtyhd.org/images/PEP/PEP_pdf/MC%20LPHSA%20FINAL%20REPORT.pdf

What is occurring or might occur that will affect our Local Public Health System and our community?

The Forces of Change Assessment identifies current external factors (such as economic, political, social, environmental, etc.) that influence a community’s health and quality of life. Monterey County’s Forces of Change Assessment can be viewed and downloaded at http://www.mtyhd.org/images/PEP/PEP_pdf/MC%20Forces%20of%20Change%20Report.pdf

The 2011-2015 Strategic Plan provides three initiatives for MCHD that were derived from community input that is presented in the Community Themes and Strengths assessment. Associated with these initiatives are specific goals and indicators, to evaluate progress and outcomes on a community-wide basis:

What are the best strategies to meet the health needs of our diverse community?

The 2011-2015 Monterey County Strategic Plan has at its core three initiatives: empower the community, enhance community health and safety through prevention, and improve access to care. Monterey County Health Department’s Strategic Plan can be viewed and downloaded at http://www.mtyhd.org/images/Admin/Stratplan/Strat_Plan_FINAL%2020mar14.pdf

Monterey County Health Department’s 2014-2015 Strategic Implementation Plan (SIP) is a companion document to MCHD’s Strategic Plan. The SIP adds specificity to the Strategic Plan with timelines, responsibilities, measures, and goals. Monterey County Health Department’s 2014-2015 Strategic Implementation Plan can be viewed and downloaded at http://www.mtyhd.org/index.php/pep-services/item/accreditation-and-quality-improvement-services

The CHIP represents a long-term, systematic effort to address health problems based on findings in the five assessments listed above. In concert with Monterey County’s public health system partners, the CHIP serves to set priorities and coordinate efforts. The CHIP further assists in developing policies that promote our community values and vision of health and well-being.
Community Engagement and Planning Process

MCHD developed an Implementation Team (iTeam) consisting of 15 Health Department staff who acted as an advisory committee for the MAPP process through monthly meetings and document planning, preparation, and review. The iTeam was instrumental in conducting a series of community dialogues over a six month period from November 2010 to April 2011. More than 500 people attended meetings in 21 locations and/or responded to an online survey to share their top health concerns and identify community strengths, challenges, and solutions. This input resulted in the Community Themes and Strengths Assessment from which the 2011-2015 Strategic Plan Initiatives were eventually derived. A table of the community meeting schedule, participant demographics, and the link to the full report is presented in Appendix A. iTeam members are presented in Appendix B.

The iTeam then oversaw the development of MCHD’s 2011-2015 Strategic Plan that proposed a community health systems integration that advocates a prevention-focused Health in All Policies, a “whole government” approach to health. Health in All Policies (HiAP) acknowledges that health and wellbeing are influenced by government sectors beyond the health sector alone. By considering health impacts across all policy domains—such as agriculture, education, the environment, fiscal and planning policies, housing, and transportation—a community’s health can be improved and the growing economic burden of the health care system can be reduced. The iTeam worked to align and coordinate cross-Bureau and partner-related activities using HiAP as a means to address specific regional needs and challenges. Health equity-related trainings were introduced to weave health equity statements into the county’s and city’s general plan, and into MCHD’s bureau performance management measures. Bureau performance measures were also linked with the Ten Essential Services of Public Health developed in 1994 by the Centers for Disease Control and Prevention. A link to the 2011-2015 Strategic Plan that was adopted by the Monterey County Board of Supervisors is presented in Appendix A.

In March 2013, more than 300 community residents were invited to attend MCHD’s day-long Local Public Health System Assessment (LPHSA) held at California State University, Monterey Bay (CSUMB). Of the invitees, 123 (40%) registered for the event. Of those registered, 116 attended, and at the end of the day, 94 “voting ballots” were collected (representing 81% of those in attendance during some part of the day). A portion of the day was spent introducing and defining the public health system partners, their roles, and relationships. The composite ballot results indicated community perceptions of how well the public health system was performing in the standards and measures of the Ten Essential Services of Public Health.
Public Health. Over all, community members perceived that our local public health system “significantly met” 27% of the Essential Services, and “partially met” the remaining 73% of the Essential Services. No portion of the Essential Services were ranked as being “not met” or “fully met,” indicating that more work needs to be done to strengthen our system of care. A link to the full LPHSA report is presented in Appendix A and the list of invitees is presented in Appendix B.

On June 6, 2013, Monterey County Health Department hosted a local health system Forces of Change Assessment (FOCA) with 30 invited community partners, representatives of elected officials, and Health Department staff. Assessment participants met in a 2-hour brainstorming session to identify external forces (trends, events, and factors) that could impact the health and quality of life in our community, and the responsiveness of our public health system in both positive and negative ways. Participants discussed and identified Forces of Change items for each of these categories:

- social
- environmental
- political
- legal
- economic
- scientific
- technological
- ethical

While these external forces, such as the price of transportation or impacts of new health care legislation, are for the most part beyond our control, being aware of their potential impacts can help a community plan and prepare for adverse events. A link to the full FOCA report is presented in Appendix A and the list of invitees is presented in Appendix B.

Monterey County Health Department’s Strategic Implementation Plan (SIP) was developed in early 2014 as a partner document to MCHD’s Strategic Plan. The SIP adds specificity to the Strategic Plan and demonstrates links to the strategic initiatives, priority activities, and outcomes. The plan received input from and was reviewed by the MCHD iTeam and Bureau Chiefs.

This Community Health Improvement Plan brings together the findings, initiatives, and priorities developed in all previously described assessments and plans. This document was developed by MCHD staff and vetted by 20 community leaders, partners, and MCHD staff. A list of reviewers is presented in Appendix A.
III. Community Principles and Visions for Health and Wellness

The 2010-2011 community dialogues with more than 500 residents led to the identification of three important community principles: (1) health and health inequities are heavily impacted by social, social-ecological and environmental conditions and policies, (2) community health gains the greatest benefit when prevention efforts focus on these social, social-ecological and environmental factors, and (3) collective efforts of community groups are needed to efficiently improve the root causes of poor health and health inequities. Monterey County Health Department is therefore actively promoting these principles among community partners.

Health in All Policies

HiAP recognizes that chronic disease and prevention measures are impacted by our social structure, environment, and policies that are managed by government and non-governmental agencies. HiAP is a framework that Monterey County is using to address chronic disease related to health inequities and the social-ecological root causes of poor health, including heart disease, cancer, homicide, suicides and accidents. Elsewhere, examples of HiAP in use include agricultural policies to enhance consumption of fruit and vegetables, transportation policies to promote physical activity, and land-use policies that support access to a variety of health-promoting resources. HiAP approaches are in use by the World Health Organization, the European Union, Australia, Finland, and other countries. California’s Health in All Policies Task Force is comprised of 19 state departments and agencies.

Social-Ecological Model for Policy, Equity, and Prevention

The goal of the Social-Ecological model is to prevent health inequities before they begin, which requires an understanding of the root causes and contributing factors. The Centers for Disease Control and Prevention uses a four-level Social-Ecological model to better understand root causes and prevention strategies1 (Dahlberg & Krug 2002). This model considers the complex interplay between individuals, relationships, communities, and societal factors. This model allows us to address the factors that put people at disadvantage and at risk for experiencing poor health, and is therefore more likely to sustain prevention efforts over time than any single intervention. The individual level identifies

---

biological and personal history factors such as age, ethnicity, education, and social-ecological status. Prevention strategies at this level are often designed to promote attitudes, beliefs, and behaviors. The **relationship level** examines social circle-peers, partners, and family member-influences that may increase the risk of poor health outcomes. Prevention strategies at this level may involve individuals plus friends, family, health care providers, community health workers or Promotores, and patient navigators represent potential sources of interpersonal messages and support. The **community level** explores institutions such as schools, workplaces, and neighborhoods. Prevention strategies at this level are typically designed to impact processes, social norms, and policies in a given system. Finally, the **societal level** looks at broad societal factors that help create an environment in which health and wellness are encouraged or inhibited. Prevention strategies focus on health, economic, educational, and social policies that help narrow the equity gap between groups in society.

**Getting “Upstream” of the Problem**

Getting a handle on improving health outcomes requires a new, “upstream” way of thinking about health equity that focuses on the root causes of poor health, such as poverty, limited education, disenfranchisement, and institutional perpetuation of social inequities. This “upstream,” or Social-ecological Model advocates shifting some resources to preventive measures that address social determinants of health, rather than utilizing all resources toward the traditional Medical Model that focuses on treating illness and injury after-the-fact.²

Upstream

The Social-ecological Model looks at unequal causes for poor community health:
- Examines the effect of social prejudices and poverty on a community’s health
- Considers institutional barriers that perpetuate disparities
- Addresses environmental conditions that unequally affect disenfranchised people

Downstream

The Medical Model focuses on individual people to fix their immediate health problem:
- Cares for a person’s immediate health need but not the community condition that created or added to the problem
- Is costly and difficult to maintain
- Doesn’t improve health inequities
- Accounts for most of health care spending

As stated in a report funded by the National Institute of Mental Health, the National Heart Lung and Blood Institute, and the John D. and Catherine T. McArthur Foundation,

*It is imperative that greater attention be given to social and economic policies that might have health consequences. More importantly, we must emphasize the need for policy makers, health care providers, and leaders from multiple sectors of society to improve environmental conditions and thus the health of populations. These approaches have the potential to improve health for all, reduce disparities in health, and create more productive and rewarding lives.*
Working Together

Our public health system includes many partnering public agencies and private or voluntary organizations that contribute to the public’s health and well-being. These include Monterey County Health Department and health care providers (safety net clinics and hospitals), and government agencies not typically considered health-related such as human service organizations, schools and universities, faith institutions, youth development organizations, public safety agencies, recreation, arts, economic and philanthropic organizations, and environmental agencies among others.

These partners form a network of entities serving different roles within the system, interacting throughout the community and contributing activities and services to our local public health system.

An initial step in forming a connected “system” of service providers is to come together – as independent and separate entities – to create a “shared vision” for what a cohesive system should look like, to understand and make visible how each partner contributes to the local public health system, and to develop a plan for what must be done to strengthen the overall system.

Although Monterey County Health Department is expected to take on a primary leadership role in these efforts, the “public’s health depends upon the interaction of many factors; thus, the health of the community is a shared responsibility of many entities, organizations, and interests in the community.”

With an increasing emphasis on working together to improve the wellbeing of individuals, families and communities, agencies, and organizations in local public health systems

---

4 Institute of Medicine, Improving Health in the Community: A Role for Performance Monitoring, http://www.nap.edu/openbook.php?isbn=0309055342
often join together in partnerships, coalitions, collaborations, and collective impact groups to achieve health objectives more quickly, effectively, or acutely than a single entity could achieve on its own.

**Partnerships** are relationships between organizations or groups that are characterized by mutual cooperation and responsibility to achieve a common goal. It can be formal, semi-formal, or informal. Partnerships can involve a variety of different actions by the partners, including joint funding, pooling resources, and agreements to share resources.

**Coalitions** are groups of two or more entities that have joined together to achieve a particular purpose. The alliance that is formed may be a temporary one, but while it exists, it allows distinct entities that generally maintain unique missions to pool their resources and combine efforts in order to effect change. Although people or groups form coalitions for many and varied reasons, the most common purpose is to combat a common threat or to take advantage of a certain opportunity, thereby contributing to the often-temporary nature of coalitions.

**Collaborations** are mutually beneficial and well-defined relationship entered into by two or more entities to attain system-based results they are more likely to achieve together than they would independently. The organizations believe they are interdependent, and partners agree that each organization has a unique role to play to address the issue. The relationship includes a commitment to mutual relationships and goals; a jointly developed structure and shared responsibility; and sharing of resources and rewards. Partners may also focus on the way in which the current system can be improved by changing individual organization policies and procedures.

**Collective Impact** groups are comprised of partners from different sectors who are committed to clearly-defined common goals for solving complex social problems that no single organization can alone, for the purpose of creating large-scale, lasting social change. The collective impact method is best used for problems that are complex and systemic rather than technical in nature. Collective impact is considered more rigorous than collaboration in that it requires five conditions to achieve meaningful

---

**Achieving Large-Scale Change through Collective Impact Involves Five Key Elements**

1. **Common Agenda**
   - Common understanding of the problem
   - Shared vision for change

2. **Shared Measurement**
   - Collecting data and measuring results
   - Focus on performance management
   - Shared accountability

3. **Mutually Reinforcing Activities**
   - Differentiated approaches
   - Coordination through joint plan of action

4. **Continuous Communication**
   - Consistent and open communication
   - Focus on building trust

5. **Backbone Support**
   - Separate organization(s) with staff
   - Resources and skills to convene and coordinate participating organizations

Retrieved March 2014 from [www.fsg.org](http://www.fsg.org)
results: a common agenda, shared measurement, mutually-reinforcing activities, continuous communication, and a backbone organization that guides, supports, and drives the collective impact method.

As a community public health system, improving outcomes around complex issues may be accomplished using collective impact methods which include aligning activities through collaborations among numerous partnering agencies, including schools and universities, faith institutions, service organization, child and youth development nonprofits, public safety agencies, recreation programs, arts and cultural communities, economic development and philanthropic organizations, environmental agencies, and others. The confluence of data, sound policies and collective impacts could help stem the growth of pressing health problems like obesity, injury, asthma, diabetes, heart disease, and other conditions that have a huge impact on our community’s health status and on our residents’ quality of life.

**Coalitions, Collaboratives, and Collective Impact Groups**

The following coalitions, collaboratives, and collective impact groups were known to be actively engaged in health and wellness activities at the time the 2014 CHIP was developed. The concerted efforts of these and other groups show the greatest promise to achieve community health and well-being for all county residents. The member organizations of each group, as of February 2014, appear in Appendix B.

**4 Cities for Peace:**
In 2010, the four cities of Soledad, Gonzales, Greenfield, and King City began a regional collaboration for gang violence reduction through prevention, intervention, and suppression programs. The cities were awarded two regional California Gang Reduction, Intervention and Prevention (CalGRIP) grants from the State of California.

- **Focus:** regional community violence.
- **Strategies:** awareness, community mobilization, direct programs.

**Building Healthy Communities – East Salinas**
In 2010, The California Endowment funded and sponsored Building Healthy Communities – East Salinas, a 10-year strategic initiative with the goal of supporting neighborhoods where children and youth are healthy, safe and ready to learn. The locally-generated comprehensive plan serves as a “road map” for local organizations and funders seeking to foster the healthy development and well-being of the East Salinas community, and also as a rallying point for Alisal residents, motivating and guiding the ongoing involvement of local leaders, now and into the future. BHC-East Salinas’ vision is that the community’s quality of life will improve under the leadership of local residents who work together and with community organizations and public agencies that share their commitment to the children and families who live in the area.
Focus: healthy children and youth, community empowerment, East Salinas.

Strategies: comprehensive community planning; adult and youth development program implementation; advocacy for healthier communities.

Link: http://www.bhccconnect.org/health-happens-here/e-salinas-home

**Child Abuse Prevention Council (CAPC)**
CAPC of Monterey County works to reduce the incidence of child abuse and neglect by coordinating prevention and awareness efforts in Monterey County. Free training for mandated reporters, educators, child care workers, and non-profit agencies that work with children is provided. CAPC is a prime sponsor in support of community events and non-profit agencies who provide an array of family services. Members of the Council are appointed by the Board of Supervisors and represent a broad cross section of public officials, service organizations, and Monterey County citizens.

Focus: children and youth under age 18

Strategies: coordination of efforts, treatment, education and awareness

Link: http://www.co.monterey.ca.us/bcandc/capc.htm

**Coalition for a Tobacco-Free Monterey County**
The Coalition’s goal is to reduce tobacco use and influence social norms towards a tobacco-free Monterey County, through education, retail licensing, and policy development.

Focus: tobacco use cessation, policy development, and resources.

Strategies: community education, prevention, and policy development.

**Coalition of Homeless Services Providers**
The Coalition of Homeless Services Providers is a group of private non-profit and public organizations working together to address the complex issues of homelessness. The Coalition’s mission is to eliminate homelessness in Monterey County by promoting interagency coordination to develop and sustain a comprehensive system of housing and services designed to maximize the self-sufficiency of individuals and families.

Focus: services for people who are homelessness.

Link: http://www.chspmontereycounty.org/
**Communities for Sustainable Monterey County**
Communities for Sustainable Monterey County works to meet the challenge of declining resources and climate change by helping communities transition to sustainable practices.

**Focus:** decrease fossil fuel and other non-renewable resource use; environmental protection.

**Strategies:** education and advocacy.

**Link:** [http://www.sustainablemontereycounty.org/](http://www.sustainablemontereycounty.org/)

---

**Community Alliance for Safety and Peace (CASP)**
More than 30 organizations and leaders joined to create CASP, including youth service organizations, county housing and health officials, local and state elected officials, criminal justice and law enforcement officials, educational leaders, business leaders, representatives of the faith community, and private funding organizations. The coalition works to reduce violence and build a better future for children through the For Our Future/Para Nuestro Futuro campaign’s activities, events, and resources.

**Focus:** violence reduction and prevention.

**Strategies:** comprehensive planning and goals; advocacy and resources for safety and peace.

---

**Communities Organized for Relational Power in Action (COPA)**
COPA works to develop the leadership skills of ordinary people to engage effectively in public life with power to negotiate with public and private sector leaders to change the economic, social, political and cultural pressures on their families.

**Focus:** housing, public safety, health care, economic development, education, immigration.

**Strategies:** broad-based, institutional organizing for effective action through empowerment.

**Links:** [http://copa-iaf.org](http://copa-iaf.org)

---

**Early Childhood Development Initiative (ECDI)**
Recognizing the tremendous need and significant long-term impact of investments in early childhood, the Children’s Council of Monterey County launched an Early Childhood Development Initiative (ECDI) in 2013. First 5 Monterey County and the Monterey County Health Department co-chair the Initiative. ECDI will use a collective impact approach, urging implementing agencies to develop common goals, coordinate resources, build capacity, and share data and information to maximize impact. The first step of this Initiative is to develop a countywide strategic vision, road map, and action plan for children from the prenatal stage through age 5 and their families.

**Focus:** early childhood, countywide.
**Strategies**: collaboration among multiple partners that are focused on shared early childhood development goals, awareness, community mobilization and advocacy, and coordination of direct programs.

**Link**: [http://mcchildren.org/initiatives/ecdi](http://mcchildren.org/initiatives/ecdi)

**Gonzales Community Collaborative**

The Gonzales Community Collaborative seeks to build bridges between public schools, community organizations, and local businesses to support the children, youth, adults, and families of Gonzales through collaborative dialogue and sharing information and resources that create an informed, educated, and healthy community.

- **Focus**: children, youth, adults, and families of Gonzales
- **Strategies**: school district and city collaborative planning and policy making
- **Link**: Gloria Rosales at grosales@monterey.k12.ca.us

**Health in All Policies (HiAP)**

HiAP is a collaborative approach to improve population health by incorporating health considerations into decision making in all sectors and policy areas. HiAP brings together a cross sector of partners to consider how their work influences or affects health and how we can improve health while advancing shared goals. HiAP is the framework used in Monterey County to address health inequities and focuses on identifying the root causes of poor health.

- **Focus**: eliminating physical, social, economic and institutional hindrances to health equity.
- **Strategies**: education, training and action teams.
- **Link**: [http://www.mtyhd.org/index.php/topics/pep-topics/item/health-in-all-policies](http://www.mtyhd.org/index.php/topics/pep-topics/item/health-in-all-policies)

**Healthy Mothers, Healthy Babies**

Healthy Mothers, Healthy Babies is as a catalyst for change and creates partnerships among community groups, agencies, nonprofit organizations, professional associations, businesses and government agencies to promote optimal health for mothers and babies and to strengthen families and build healthy communities.

- **Focus**: improving infant, maternal, and family health
- **Strategies**: education and collaborative partnerships of public and private organizations to promote, protect, and support breastfeeding
**Literacy Campaign Monterey County**

Literacy Campaign Monterey County serves in a convening, collaborating capacity to raise awareness regarding literacy needs and advocate for literacy in Monterey County, build partnerships with a broad array of stakeholders, and providing skills development of service providers.

- **Focus**: policy development to improve literacy proficiency in Monterey County.
- **Strategies**: advocacy, training, collaboration among multiple partners with shared goals.
- **Link**: [http://literacycampaignmc.org/](http://literacycampaignmc.org/)

**Monterey County Children’s Council**

The Council’s purpose is to enhance services and decrease duplicative efforts in child and youth service provisions by developing a comprehensive and collaborative delivery system of services for children and their families. The Council was established by the Board of Supervisors on June 9, 1992, and is comprised of over 25 organizations representing a diverse group of stakeholders including business, funders, philanthropy, service providers, law enforcement, health and mental health, and social services.

- **Focus**: children’s education, health, and well-being.
- **Strategies**: All Kids, Our Kids (a countywide movement dedicated to building stronger, more resilient children and youth by creating positive, caring and supportive schools and communities through positive youth development) and Early Childhood Development Initiative (see above).
- **Link**: [http://mcchildren.org/](http://mcchildren.org/)

**Monterey County Cradle to Career Community Partnership**

The Monterey County Cradle to Career Community Partnership was formed in 2014 to seek measurable improvements in learning and education outcomes for children and youth in the Monterey County region. The long-term goal is to ensure that every child is prepared for school, is supported inside and outside of the classroom to achieve in school, successfully graduates from a college, credential or training program, and enters a career with the talent to thrive over a lifetime. This initiative strives to realize these goals by pursuing continuous improvements over time and leveraging best practices in social innovation and change, and in human learning and development. The early childhood development chapters of cradle to career are coordinated by ECDI (see above).

- **Focus**: improvement in learning and education outcomes for local children and youth, cradle to career.
- **Strategies**: develop an aligned, community vision, measure target outcomes, seek insights about factors influencing the learner’s experience, discover what works in education in our local context, and pursue improvements through collaborative, continuous improvement.
- **Link**: Cynthia Holmsky at cnelsonholmsky@csumb.edu
Monterey County HIV Planning Group (MCHPG)
Monterey County HIV Planning Group (MCHPG) is an unincorporated Planning Group of service providers and concerned community members whose purpose is to identify local, met and unmet, needs for HIV education/prevention and care/treatment services. Anyone is welcome to attend the meetings which are typically held quarterly, at a rotating location.

Focus: residents having or at risk for HIV and the HIV service providers.

Strategies: exchange of information, data, prevention activities, and events.

Monterey County Immunization Coalition
The Monterey County Immunization Coalition is comprised of professionals from the medical community, schools, and other community-based organizations. The coalition has 6 goals: To increase vaccine rates by promoting vaccines to all populations/ages; to remove barriers to obtaining vaccinations; to educate parents and providers; to decrease missed opportunities; to expand the coalition and to coordinate our efforts.

Focus: advocating for the benefits of immunizations.

Strategies: advocacy and education.

Link: contact Angela Gladstone at GladstoneA@co.monterey.ca.us

Monterey County Child Care Planning Council
Monterey County Child Care Planning Council create a comprehensive, integrated child care delivery system that offers safe, high quality, culturally sensitive, affordable child care to Monterey County families who need it; that allows parental choice; and is supported by a partnership of public and private resources.

Focus: preschool and afterschool child care.

Strategies: forum for child care issues and policy development

Link: http://www.montereycoe.org/student-services/mcccpc

Monterey County Vulnerable Infant Care Coordination Collaborative
Health and social services professionals from 25 public and non-profit organizations serving medically and/or developmentally vulnerable infants launched the Vulnerable Infant Care Coordination Collaborative to establishing a comprehensive and integrated system of care coordination for high risk preterm or low birth weight infants. Collaborative activities focus on strengthening care coordination and collaboration, increasing member’s knowledge of services and referral criteria to ensure timely access to appropriate services, and advocating to fill gaps in needed services.

Focus: improving health outcomes for infants and children with special health care needs

Strategies: information exchange, case reviews and resource development

Link: Dyan Apostolos, Monterey County Health Department, at apostolosd@co.monterey.ca.us
Monterey Regional Health Development Group (MoReHealth)
MoReHealth is comprised of health care and community leaders in Monterey County who meet quarterly to share ideas, discuss initiatives, interact with State and federal legislators, and engage invited speakers on health care topics. MoReHealth attendees include local hospital executives, physicians, military health care leaders, government officials, allied health professionals, and executives from community agencies, media and education sectors. Recent examples of MoReHealth agenda topics include the Affordable Care Act including enrollment and provider capacity in Monterey County, local Employee Health Promotion programs, Health Needs Assessments in Monterey County, and federal legislation to improve local Medicare physician payments.

Focus: events and trends affecting the health and medical care of Monterey County residents.
Strategies: MoReHealth facilitates interaction of health and community leaders to support shared understandings, advocacy and innovation.
Link: Alan McKay, MoReHealth Chair (amckay@ccah-alliance.org)

Nonprofit Alliance for Monterey County
Nonprofit Alliance of Monterey County (NAMC) is an unincorporated membership organization governed by Core Leadership, a 10 to 15-member group elected annually and representing the range of key actors in the nonprofit industry. NAMC strives to develop and implement programs that encourage its members to work collaboratively and support one another, that improve the internal operations and structures of nonprofit organizations, and that speak to the larger community about the critical role of the nonprofit industry in society.

Focus: nonprofit public benefit organizations.
Strategies: collaboration and training around diversity and economic impacts.
Link: http://www.alliancemonterey.org/index.html

Nutrition and Fitness Collaborative of the Central Coast (NFCCC)
Nutrition and Fitness Collaborative of the Central Coast (NFCCC), is comprised of 50+ agencies spanning Monterey, Santa Cruz, and San Benito counties, representing schools, agencies, and organizations working to improve the health and well-being of Central Coast residents.

Focus: planning, information and data sharing, networking, coordination.
Strategies: trainings, conferences, community forums, mini-grants.

Preventing Alcohol-Related Trauma (PARTS)
Preventing Alcohol-Related Trauma works to prevent alcohol-related trauma and youth initiation of alcohol, tobacco, and drug use in Salinas, on the peninsula, and in South county.

Focus: youth alcohol and drug abuse.
**Strategies:** Safe Teens Empowerment Project to shift behaviors through environmental changes, policy enforcement, parent advocates, and media influence.
**Link:** [http://www.sunstreetcenters.org/prevention/coalitions](http://www.sunstreetcenters.org/prevention/coalitions)

**Safety Net Integration Committee**
This committee is comprised of the county's four hospitals, health and insurance providers, and IT experts working to integrate Safety Net Provider Electronic Medical Record patient care information through participation in the Peninsula Health Information Link. This work will improve the ability of the county's health care safety net to coordinate care for low-income populations through implementation of new strategies that strengthen the integration of community health centers (CHCs), safety net hospitals and county-operated safety net providers.

**Focus:** increase safety-net patient access to health care and efficiently share health information between safety-net providers.

**Strategies:** integrate Safety Net Provider Electronic Medical Record patient care information through participation in the Peninsula Health Information Link.

**Link:** contact Monterey County Health Department Clinic Services, 831/755-4500

**Seaside Leadership Team**
The Seaside Leadership Team was created in August 2012 as part of the Community Transformation Grant Initiative. Monterey County was one of 12 counties chosen to become a CA4Health county and the community of Seaside was chosen for their readiness to build a healthier community among their diverse population. Through collaboration, a Leadership Team was convened to meet bi-monthly and to begin to address health disparities in the community of Seaside.

**Focus:** four strategic areas include: 1) chronic disease self-management, 2) reducing sugary sweetened beverage consumptions, 3) Safe Routes to School and healthy environments such as 4) smoke-free multi-unit housing opportunities. The Leadership Team will implement a collaborative approach that will be sustainable in years to come with great results.

**Strategies:** train community health workers and clinic staff to deliver Living Well series for community residents to improve chronic disease and managed care. Train youth leaders as change agents in reducing sugary sweetened beverage consumption among their peers and highlight the problem of second-hand smoking in multi-unit housing. Provide technical assistance to City of Seaside for vendor policy revision.

**Link:** contact Monterey County Health Department/Prevention Team at 831-755-4541

**Sexual Assault Response Team (SART) Coalition**
The Sexual Assault Response Team (SART) is a victim-sensitive program designed to provide a team approach to responding to survivors of sexual assault in our community who have decided to report the assault. SART consists of trained nurse examiners and physicians’ assistants, also known as Sexual Assault Forensic Examiners, local law enforcement agencies, and certified sexual assault victim
counselors from the Monterey County Rape Crisis Center. The SART approach helps reduce trauma and increase support, while ensuring efficient and consistent evidence collection. Forensic exam costs are covered by law enforcement.

Focus: victims of sexual assault and survivors of child sexual abuse, and their families and support groups.
Strategies: reduce trauma and increase support; endure efficient and consistent evidence collection.
Link: http://www.mtryrapecrisis.org/

South County OutReach Efforts (SCORE)
South County OutReach Effort (SCORE) is hosted by California Rural Legal Assistance as a collaborative network of health, education and human service providers represented by public, non-profit and educational agencies and organizations serving South Monterey County. SCORE’s mission is to (1) improve service access and quality by providing a forum for information and referral, sponsoring countywide events, and advocating for our South County Community, and (2) to increase the capacity of its member agencies by avoiding duplication of services and proving opportunities for the professional development of its members.
Focus: south county health and human services
Strategies: collaboration and information exchange
Link: emma.bojorquez@edd.ca.gov

Impact Monterey County
Impact Monterey County is a comprehensive, county-wide community dialogue sponsored by United Way Monterey County that will shine a light on community conditions and solicit residents’ aspirations for their quality of life as regards education, economic self-sufficiency and health. With the participation of approximately 1-2% of county residents, our community will benefit from the alignment of stakeholders toward common goals and measurements that improve conditions for all.
Focus: community aspirations for improved quality of life.
Strategies: access and measure community needs, collaborate with other works in progress, align stakeholders toward common goals, implement a common agenda, measure progress and sustain.
Link: http://www.unitedwaymcca.org/yourvoicecounts
IV. Developing Health Priorities

Health Data by Race/ethnicity, Age Group, and Gender

Data is the foundation of sound program design, service delivery, and policy development. With reliable data, communities work toward achieving healthy outcomes and equal access to social, educational, economic, and health opportunities. Conducting periodic community health assessments is one of 10 Essential Services of Public Health as defined by the Centers for Disease Control and Prevention: “Monitor health status to identify and solve community health problems.”

The Monterey County 2013 Community Health Assessment (can be downloaded from [http://www.mtyhd.org/images/PEP/PEP_pdf/Final_CHA_pdf_11_21_13.pdf](http://www.mtyhd.org/images/PEP/PEP_pdf/Final_CHA_pdf_11_21_13.pdf)) presented data for several hundred indicators over ten broad categories. Monterey County Health Department and community partners conducted a comprehensive review and analysis of secondary quantitative data from local, state, and national agencies and surveillance systems. The most current, standardized and reliable data were used.

The 2013 CHA findings shine light on the social determinants of health and health outcome disparities existing in our county within county regions, among race/ethnic groups, age groups and genders. These disparities appear prominent in these ways:

**Poverty**
- Nearly 40% of Monterey County residents lived at or below 200% of the Federal Poverty level in 2012.
- Of children and youth younger than age 18, 25% lived at or below 200% of the Federal Poverty level in 2012.
- Nearly 25% of Hispanic/Latino residents and 22% of Black residents lived under the Federal Poverty level in 2010, indicating a disparity when compared to 8% of the White, non-Hispanic population.
- Of children and youth younger than age 18, 25% lived in poverty

**Social Disparities**
- Thirty percent (30%) of Monterey County’s residents age 25 and older in 2012 had less than a high school education.

**Access to Health Care and Resources**
- All of Monterey County is designated as a primary care shortage area by the federal Health Resources and Services Administration. Most of the county is medically underserved, which includes dental and mental health services.
Health Screening

- In 2009, 45% of all Hispanic/Latina women reported they never had a mammogram for breast cancer screening; the White, non-Hispanic/Latino percentage was 17%.
- In 2009, 45% of all Hispanic adults reported they never had a sigmoidoscopy for colorectal cancer screening; the White, non-Hispanic/Latino percentage was 19%.

Health Behaviors

- There were three times as many male smokers compared to female smokers from 2003 to 2012.

Chronic Disease

- Age-adjusted diabetes mortality rates among Hispanic/Latino and Black residents were significantly higher compared to White, non-Hispanic residents.
- Age-adjusted prostate cancer incidence rates increased significantly among Hispanic residents from 2001 to 2010, while rates decreased for Asian/Pacific Islander residents.

Communicable Disease

- Pertussis (whooping cough) infection rates significantly increased in Monterey County from 1999 to 2010, and there significantly higher for 0 to 14 year olds than for other age groups.

Mortality

- Unintentional (accidental) mortality rates significantly decreased for Hispanic/Latino residents from 1999 to 2010, but rates significantly increased for Multiple/Other race residents.
- The 2010 percentage of North county deaths due to unintentional injury was more than double the countywide percentage.
- Homicide rates from 1999-2001 through 2008-2010 were significantly higher for Hispanic/Latino and Black residents compared to White, non-Hispanic residents.
- Mortality rates were consistently lower for White, non-Hispanic residents compared to Black and Hispanic/Latino residents, although not statistically significant.
- Homicide rates significantly increased for Asian/Pacific Islander and Black residents from 1999 to 2010, and were significantly higher, along with Hispanic/Latino residents, compared to White, non-Hispanic residents.

Leading Causes of Death:

- Disparities in the leading causes of death and the years of potential life lost prior to age 75 are apparent by geographical regions within the county.

Regional differences can be seen in the leading causes of premature death that affect life expectancy in Monterey County. For example, heart disease appears as the leading cause of premature death in the coastal and greater Salinas regions, but not in the North or South county regions. For deaths that occurred during 2006-2008 among residents who were less than 75 years old, unintentional injury was the #1 cause in three out of four regions (see tables below), and unintentional injury occurred to a greater
degree in the North county region than in other regions. Homicide was the #4 cause in three of four regions, but was not among the top four causes of premature death in the coastal region. Suicide, perinatal conditions, and liver disease each occurred in only one region. These regional differences are important in understanding population-based health education and outreach.

Regional Differences in Leading Causes of Premature Death as a Percent of Years of Potential Life Lost (prior to age 75), 2006-2008

Source: California Department of Public Health, Health Information and Research Section, Death Statistical Master Files, 2006-2008 and US Census Bureau.

Community Dialogues and Input
To collect community input during the strategic planning process, MCHD staff attended community meetings held over six months throughout Monterey County to present residents with a recent community health assessment and regional health disparity data. MCHD and Natividad Medical Center staff visited a variety of community groups—from Migrant Farm Workers’ Parents Group to the Junior League. In all, from November 2010 to April 2011, more than 500 people attended meetings in 21 locations or responded to an online survey.
Community Meeting Participant Demographics, November 2010-April 2011

</tbody>
</table>

Note: The number of meeting participants was collected from the meeting sign-in sheets. It is estimated that approximately 15% of meeting attendees did not use the sign-in sheet.

¹North County = Aromas, Castroville, Elkhorn, Moss Landing, Pajaro, Prunedale, Royal Oaks,
Coast Region = Big Sur, Carmel, Carmel Valley, Highway 68 Corridor, Marina, Monterey, Pacific Grove, Seaside
Salinas Region = City of Salinas and immediate unincorporated surrounds
South County = All communities South of Salinas in Salinas Valley

After the presentations and a question/answer session, regional meeting participants were asked to name their most urgent health concerns and talk about the improvements they would like to see. In all four county regions, “access to health care” was named as the #1 concern among residents. “Obesity” and “Teen Births” were named as concerns in three regions, and “Mental Health” and “Diabetes” were each mentioned in two regions. Regional differences were apparent, as demonstrated on the following tables:
## Top Regional Concerns, 2011-2012

**Comments on Concerns from Community Dialogue Participants:**

- “Castroville has no WIC center—we have to go to Salinas.”  North County Resident
- “Teen pregnancy and access to birth control are important issues”  Coastal Region Resident
- “There is agricultural run-off into the town of Chualar, and children play in those puddles.”  South County Resident
- “Mental health services are lacking, especially for teens & parents, retired people and those who need substance abuse programs; parents and families need more education for anger management and depression.”  Coastal Region Resident
- “Mucha gente no hacen chequeo de salud porque no tienen dinero o aseguranza.”  Residente de la Región de Salinas
- “If you don’t speak English, you need to bring a family member to translate”  South County Resident
- “Obesity occurs all around. It is not an individual problem; it is a problem in families. We need that to offer more education to the whole family to change habits.”  Salinas Region Resident
- “People don’t feel safe; there is poor lighting, poor or no sidewalks; bushes are overgrown causing fire hazard; gangs. Dangerous for kids to walk to school, especially with no crossing guards, and most parents working so can’t walk with kids.”  South County Resident

Comments on Solutions from Community Dialogue Participants:

“We are a walking town, so many people can get walking exercise; Can we create walking groups?”  North County Resident

“Aunque hay falta de servicios, estamos abriendo puertas. Promotores pueden desarrollar confianza con la gente.”  Residente de la Región de Salinas

“Free or affordable after school activities of all types are needed for children & youth to keep them safe and healthy.”  Coastal Region Resident

“We need more after school activities like sports, cooking, art, dancing, drill teams, field days.”  North County Resident

“We need translation services in clinics or for doctors.”  South County Resident

“There is no pharmacy in Castroville; we need a local pharmacy.”  North County Resident

“As parents we need provide the education of prevention. The schools need to share the information to the parents not only to the children /girls. Education for the parents is basic – the schools need to teach to parents to share the information.”  Salinas Region Resident

“We need more parks and recreation activities in Seaside.”  Coastal Region Resident

“I think we need more prevention services because it’s too late when they get sick.”  North County Resident

“We need more health care options in South County.”  South County Resident

“More nutrition, and exercise, and healthy living programs are needed in schools and for the public—especially for non-English speaking residents.”  Coastal Region Resident

“We need educational support for better jobs and more after-school options for youth.”  South County Resident

“Promotores can develop trust with the people.”  Salinas Region Resident

“We also need a farmers market and cooking healthy classes.”  North County Resident

“Parents and families need more education for anger management and depression.”  Coastal Region Resident
Using a Regional Approach

Because of distinct differences in health outcomes and resident concerns found between the four county regions (North, coastal, Salinas, and South), MCHD's Strategic Planning Committee members agreed upon a regional approach to addressing health conditions and disparities. The regional approach is documented⁵ as being relevant and promising in reducing health inequities. This approach examines how thinking, communication, and culture interact, and offers assistance in understanding those interactions. In regionalizing socioeconomic and health data in conjunction with our community engagement process, residents were able to associate the data with their concerns, regional strengths, challenges, and appropriate solutions.

An example of the regional approach has been used in MCHD's Public Health Regional Teams that are comprised of a multi-disciplinary team of nurses and registered dietitians who provide case management and home visitation services throughout Monterey County. Four geographically-distributed teams strive to address community needs and priorities, provide a continuum of care between outpatient clinics, hospitals, and medical providers to support improved health, and promote the adoption of healthy behaviors. Efforts are focused on Medi-Cal patients with chronic medical conditions, nutritional deficiencies, and psychological stressors. Teams are complemented by public health educators who conduct activities to bolster local community environments that support healthy choices.

Other examples include MCHD's regional offices for behavioral health, clinic services, and environmental health located in and surrounding Salinas; in Seaside and Marina on the Monterey Peninsula; and in the South county cities of Soledad and King City.

Strategic Initiatives

The following three overarching health and wellness initiatives were developed – as a result of the community dialogue sessions, MCHD's use of the social-ecological model, and community health disparity data – to span regionally specific needs and solutions:

- **Initiative 1:** Empower the community to improve health through programs, policies, and activities.
- **Initiative 2:** Enhance community health and safety by emphasizing prevention.
- **Initiative 3:** Ensure access to culturally and linguistically appropriate, customer-friendly, quality health services.

⁵ Wallack, Lawrence (2008). You can get there from here; Social Equity and Opportunity Forum, Portland University.
It is important to note that other recent community reports and assessments had identified similar overarching concerns and objectives — these are:

- Public Health Regional Teams data, 2010
- MCHD annual Health Profiles, 2005-2009
- MCHD Maternal, Child, & Adolescent Health, 2011
- Women and Girls’ Quality of Life Report, 2011
- Building Healthy Communities planning, 2010
- 2012-16 Monterey County Area Agency on Aging Plan
- 2013 Safety Net Provider Studies
- Castroville LULAC study, 2009
- Federal health care reforms (ACA)
- 2012 Kindergarten Readiness Assessment
- 2012 Monterey County Child & Family System Improvement Plan

Of equal importance are the connections between MCHD’s health initiatives and those of California’s “Let’s Get Healthy” plan and the US Department of Health and Human Services’ 2010-2015 Strategic Plan:
Initiative Work Underway
The three initiatives identified by MCHD through its review of health data and community dialogues are listed in the following tables by county-wide and regional service distribution. Examples of organizations, collaborative partners and collective impact efforts are also listed.

### Strategic Initiative 1:
**Empower the community to improve health through programs, policies, and activities**

#### Examples of some Monterey County-wide Initiatives
- Affordable Care Act enrollment
- Chronic Disease self-management education
- Comprehensive Perinatal Services Program
- CSUMB STRIVE Cradle to Career
- Diabetes and immunization registries
- Health Educators & Promotores
- Health Equity training
- Health in All Policies
- Healthy Stores, Healthy Community campaign
- Immunizations & IZ registries
- Mental health children, youth, & adult services
- National Public Health Accreditation
- Tobacco-free multi-unit housing complex project

#### Examples of some Regional Efforts

- Kinship Center: [foster child placement](#)
- Meals on Wheels: [nutritional support](#)
- Monterey County Child Care Planning Council: [adequate, quality child care services](#)
Monterey County Clinic Services: primary and specialty health care
Monterey County Dept of Social Services: social supports and protective services
Monterey County Early Start Program: services for infants with special needs
Monterey County Literacy Campaign: improved literacy levels for children and adults
Monterey County Office of Education: Head Start & Early Head start nutrition and health services
Monterey County Veterans Services Collaborative: outreach and advocacy
Monterey County Women, Infants, and Children Services: nutritional supports
Multiple Sclerosis Quality of Life Project: empowerment and advocacy
Poder Popular: Promotores Comunitarios (health promoters)
Second Chance Youth Program of Monterey County: violence prevention
Soledad Medical Clinic: primary and specialty health care
United Way of Monterey County: Community Assessment project

Strategic Initiative 2:
Enhance community health and safety by emphasizing prevention

Examples of some Monterey County-wide Initiatives

| AB 109 mental health rehabilitation services | Teen pregnancy prevention |
| Car seat installation inspection | Restaurant & catering truck inspections |
| Cottage food industry inspections | Social host ordinance |
| Early Childhood Development Initiative (ECDI) | Tobacco retail licensing |
| Fresh fruit & vegetables in schools | Transition-age youth services |
| Health in all Policies | Violence prevention programs |
| Lactation accommodation | Youth & adult drug courts |
| Portable toilet inspections

Additional examples of health system of care organizations:

American Red Cross: blood donation services
BiNational Health Week Planning Committee: Latino health care
Birth Network of Monterey County: birth education and resources, parenting
Boys and Girls Clubs: pro-social and prevention programs for youth
California Rural Legal Assistance: agricultural worker health program
Catholic Charities, Diocese of Monterey: tattoo removal
Central Coast Center for Independent Living: aging in place
CHAMACOS: environmental exposure to pesticides and other chemicals
Coalition for a Tobacco-Free Monterey County: tobacco use and promotion cessation
Coalition of Homeless Services Providers: preventing homelessness
Environmental Justice Network: environmental cleanup and reuse
Family PACT Program: family planning
Girls, Inc. of the Central Coast: leadership and self-empowerment for girls ages 9 to 18
Harmony at Home: school-based traumatized child and youth counseling and bullying prevention
La Leche League: **breastfeeding supports**  
March of Dimes: **birth defect prevention**  
Monterey County Rape Crisis Center: **education and investigation**  
Nutrition & Fitness Collaborative of the Central Coast: **nutritional education and resources**  
Planned Parenthood Mar Monte: **family planning**  
Poder Popular: **Promotores Comunitarios (health promoters)**  
Regional Diabetes Collaborative: **health education and resources**  
RotaCare Free Clinic of Monterey Peninsula: **health services for eligible low-income residents**  
Second Chance Youth Program: **youth violence prevention**  
Veterans Transition Center: **veteran health and wellness**  
ViaCare Monterey County: **health services for eligible low-income residents**  
YWCA of Monterey County: **pro-social and prevention programs for youth**

### Strategic Initiative 3:  
Ensure access to culturally & linguistically appropriate, customer-friendly, quality health services

#### Examples of some Monterey County-wide Initiatives
- Affordable Care Act outreach  
- Crisis response teams  
- CSUMB BSN and MSW programs  
- Diversity and health equity training  
- Electronic Medical Records integration  
- Expanded clinic services hours

#### Home visits
- Increased HIV testing capabilities  
- Low income/sliding scale health programs  
- STEMI training & response times  
- Workforce education, development, & training

#### Examples of some Regional Efforts

V. 2014-2018 Community Health Improvement Plan for Monterey County

The following sections detail objectives, strategies, indicators, and baseline data, plus examples of agencies and organizations working to improve health and health equity. Rather than representing the full spectrum of efforts and partners working to improve population health in Monterey County, this matrix serves as an abbreviated representation of health improvement work happening in Monterey County among numerous community-based organizations and public agencies.

2014-2018 objectives presented in the Action Plan Matrix below were selected from two sources:

- concerns voiced by residents during the extensive community dialogues of 2011-2012
- health disparities and negative trends identified in the 2013 Community Health Assessment for Monterey County

Also presented with each of the 15 Action Plan objectives are corresponding targets as set by Healthy People 2020, the national agenda to improve the public’s health. The Healthy People 2020 targets were selected to show levels of acceptable improvement and to also convey the conviction that all Monterey County residents are entitled to the same high standard of health and wellness as other residents across the country. Like the Healthy People 2020 objectives, the objectives identified for Monterey County can be categorized in these four broad areas:

- General Health Status
- Health-Related Quality of Life and Well-Being
- Determinants of Health
- Disparities

While some targets may appear especially ambitious, a primary focus is on health equity – and the disparities that health inequities cause. This is a fundamental Monterey County Health Department value that drives decisions on resource allocation and intervention strategies.

VI. Moving Forward

Unified, Sustainable Efforts

The consulting firm FSG defines collective impact as “bringing diverse organizations together with a common goal of solving a social problem. All actors involved collaborate in a highly-structured manner to make a true impact on a complex issue.”

Health and social services conditions are inherently complex due to multiple known and unrecognized contributing factors, wide arrays of human behaviors, and unpredictable, ever-changing life events. Single agencies and even partnering organizations cannot adequately address the multitude of deeply imbedded social factors that exist on individual, neighborhood, community, institutional, and policy levels. The power of collective impact lies in the heightened vigilance that comes from multiple organizations looking for resources and innovations through the same lens, the rapid learning that comes from continuous feedback loops, and the immediacy of action that comes from a unified and simultaneous response among all participants.

Contrasted with isolated impact, collective impact works in the same ways that systems do, with many inter-related components, ongoing interactions, and abilities to generate novel results.

Like the social-ecological model of “moving upstream,” social impact’s system-thinking approach seeks deeper levels of learning and understanding about the root causes of a problem in order to create transformative change. Guiding the process are five key elements that keep the collective organizations focused and moving forward: a common agenda and shared vision; shared measurement for tracking progress and accountability; mutually reinforcing activities within a joint plan of action; trustful and

---

Community Health Improvement Plan for Monterey County
consistent communication; and a specified structure (the backbone) that provides convening, coordinating, resources and other conditions in which collective dynamics can occur.

In California, the collective impact model is being used by Blue Shield of California Foundation, California Health care Foundation, The California Endowment, The David and Lucile Packard Foundation, and others. Here in Monterey County, collective impact is embraced by The Community Foundation for Monterey County, Monterey County Children’s Council (Early Childhood Development Initiative), Monterey County Health Department, United Way Monterey County, California State University Monterey Bay and others to build public will and advance policy for social improvements.

Recommendations
Active participation across our public health system of care builds capacity within our collective, community-based groups to resolve social and environmental factors that contribute to poor health outcomes. Adopting these recommendations will help assure concerted, self-sustaining efforts:

**Recommendations to Advance our Public Health System Initiatives**

**Eradicate Health Inequities**
- Among public health system partners, broadly adopt the health equity approach using the Social-Ecological Model to address root causes of poverty, social disparities, inequitable access to care, chronic and communicable disease, injury, and violence.

**Develop the Power of Collective Impact**
- Continue to develop collective impact methods through collaborations among numerous partnering agencies that traditionally are not health-related, including schools and universities, faith institutions, service organizations, youth development nonprofits, public safety agencies, recreation programs, arts and cultural communities, economic development and philanthropic organizations, environmental agencies, transportation agencies, and others.

**Use the Social-Ecological Model**
- Use the Social-Ecological Model to address health inequity factors on individual, family, community, and policy levels, thereby sustaining prevention efforts over time.

**Develop Policies**
- Develop policies to improve social, environmental, and quality of life conditions to create healthy, more productive and rewarding lives. Create more opportunities to provide health impact reviews on proposed policies.
Review and Improve
The 2014-2018 CHIP for Monterey County will be reviewed biannually, in even-numbered years, to revisit CHIP priorities and refine strategies. A convening of the local public health system partners will be conducted in the spring of even-numbered years, and current indicator data in this plan will be presented by Monterey County Health Department to gauge progress toward population health improvements. Health and wellness studies conducted by health system partners will also inform updated CHIPS, as will progress achieved by collaboratives, coalitions, and collective impact groups.

Monterey County Health Department will continue working toward national public health accreditation status – including the development of internal Quality Improvement and Workforce Development plans – and promoting Health in All Policies and interventions that address root causes of health inequities.

Getting Involved
Individuals, organizations, and agencies are encouraged to engage in these ongoing public health system efforts to improve community health. Individual agencies and organizations, plus collective efforts, are described by name and internet addresses in the body and appendix of this report. Monterey County Health Department maintains and regularly updates a database of contact information for more than 300 organizations. There are many ways to get involved, large and small, and the invitation to join this effort is open. We look forward to working with you! If you would like to learn more about how to connect, if you want to be added to our partner organization database, or if you are a partner who is not mentioned in this Community Health Improvement Plan, please contact us:
